Computer Science Graduate · Seeking Full-Time Software Engineer Position · U.S. Citizen

EDUCATION

Rochester Institute of Technology

Bachelor of Science in Computer Science, Minor: Mathematics

Rochester, NY

May 2026

Cumulative GPA: 3.85/4.00

TECHNICAL SKILLS

Backend & Python, FastAPI, SpringBoot, RESTful API Design, C++, SQL

API:

Databases: PostgreSQL, Prisma ORM, MySQL, Firestore, Data Modeling

DevOps: Docker, Kubernetes (Working Knowledge), GitHub Actions (CI/CD), GitLab CI/CD, Linux, Google Cloud Platform

AI-Assisted Dev: GitHub Copilot, OpenCode (Multi-Agent Orchestration), Claude Code

Security: Role-Based Access Control (RBAC), NextAuth.js, API Gateway Patterns, Cloudflare R2

Languages Java, C#, C, TypeScript, Dart, HTML/CSS

(Other):

PROFESSIONAL EXPERIENCE

Embedded Software Engineer

Waygate Technologies (Baker Hughes)

Jul 2025 - Dec 2025

Skaneateles, NY

- Engineered automated data processing and Git-based CI/CD pipelines to track production quality metrics, reducing manual inspection overhead and enforcing software engineering best practices
- Processed, modeled, and analyzed large-scale industrial inspection data to optimize backend pipeline data flow and system reliability
- Deployed Python-driven automated test cases for system validation, improving regression coverage for build releases across distributed environments
- Built and deployed computer vision models into production testing environments using DirectML and C++ inference pipelines
- Leveraged GitHub Copilot to accelerate development of C++ inference pipelines and complex data automation scripts, maintaining comprehensive code documentation

Key Skills: Python, C++, Data Pipelines, Automation Testing, CI/CD, GitHub Copilot

Jr. Software Developer

Tive Technology

Jun 2024 - Sep 2024

Remote

- Developed and maintained robust RESTful APIs using SpringBoot for server-side business logic, optimizing backend database interactions
- Designed and implemented secure backend services including Firestore data modeling, Authentication, and Security Rules
- Built 4 mobile user-facing features with Flutter, reaching 1,000+ active users
- Assisted in platform reliability testing and debugging backend services to meet multi-user performance guidelines

Key Skills: RESTful APIs, Python, SpringBoot, Firestore, Data Modeling, Backend Service Architecture, GitHub Copilot

Research Assistant

RIT CAIR Lab (Computational Accessibility & Inclusion Research)

Sep 2023 - May 2024

Rochester, NY

- Containerized a real-time data-processing web application using Docker, ensuring reproducible deployment across Linux-based environments in a collaborative scientific research setting
- Built a scalable RESTful API layer to handle high-throughput live transcription and data stream processing for accessibility research
- Supported multidisciplinary research workflows by collecting, structuring, and analyzing experimental data sets comparing traditional vs. affective captioning systems
- Developed frontend interfaces using React and Vue.js for live captioning visualization

Key Skills: Python, RESTful API Design, Docker, Google Cloud Platform, Linux, GitHub Copilot, React, Vue.js

PROJECTS

Full-Stack Data & E-Commerce Platform

Jan 2026 - Present

Personal Project

Spokane, WA

- Architected a production-ready backend with TypeScript, PostgreSQL, and Prisma ORM for relational data management and API service layer
- Implemented secure authentication and Role-Based Access Control (RBAC) patterns handling multi-tier user lifecycles, cart management, and API routing
- Containerized applications using Docker multi-stage builds and deployed with automated CI/CD via GitHub Actions
- Integrated Cloudflare R2 object storage with API gateway patterns for rate limiting, routing, and asset management
- Orchestrated multi-agent development workflows using OpenCode, delivering features via AI-assisted parallel engineering with human-in-the-loop code review

Key Skills: TypeScript, PostgreSQL, Prisma ORM, Docker, CI/CD, RBAC, Cloudflare R2, OpenCode, GitHub Copilot, API Gateway

NeuralCube - Open Source Autonomous Robot

2024 - Present

Collaborator (with Chanel F. Cheng)

Remote

- Contributed to an open-source autonomous system orchestrated by multi-agent Large Language Models (LLMs) for real-time data ingestion and processing
- Deployed efficient LLM inference serving using vLLM and SGLang on Linux environments, prioritizing low-latency backend responses
- Worked collaboratively in a team environment utilizing Git for version control, code documentation, and systemic debugging

Key Skills: Python, Linux, vLLM, SGLang, Multi-Agent Systems, LLM Inference

4G LTE Unlimited Distance Drone

Aug 2023 - Dec 2024

Personal Project

Rochester, NY

- Built a programmable 4G LTE drone using Raspberry Pi with internet-based communication for beyond-visual-line-of-sight operation
- Implemented server communication for real-time image segmentation and autonomous navigation commands
- Integrated PixHawk flight controller with ArduPilot and Sixfab 4G LTE cellular hat

Key Skills: Python, Raspberry Pi, Computer Vision, IoT
