

Yiyuan (Steve) Wufeng

(585) 370-3124 · yfeng219@gmail.com · linkedin.com/in/yiyuan-wufeng · steviewufeng.github.io

Computer Science Graduate · Cloud-Native & AI-Assisted Development · U.S. Citizen

Languages: Chinese (Fluent) · English (Fluent) · Japanese (Intermediate)

EDUCATION

Rochester Institute of Technology

Rochester, NY

Bachelor of Science in Computer Science, Minor: Mathematics

May 2026

Cumulative GPA: 3.85/4.00

TECHNICAL SKILLS

Languages:	Python, Java, C++, C#, C, TypeScript, Dart, HTML/CSS, SQL
Frameworks:	FastAPI, SpringBoot, React, Vue.js, Flutter, Prisma ORM, NextAuth.js
Databases:	PostgreSQL, MySQL, Firestore
Cloud & DevOps:	Docker, Kubernetes, GitHub Actions, GitLab CI/CD, Linux, GCP, Cloudflare R2
AI Dev & Tools:	OpenCode (Multi-Agent Orchestration Framework), Claude Code, GitHub Copilot, vLLM, SGLang
Core Competencies:	RESTful API Design, RBAC, API Gateway Patterns, Data Modeling, Computer Vision, Multi-Agent Systems, IoT

PROFESSIONAL EXPERIENCE

Freelance Software Engineer

Jan 2026 - Present

Buho

Remote

- Architected a production-grade backend with TypeScript, PostgreSQL, and Prisma ORM, achieving clean API separation and normalized relational data management
- Implemented RBAC and authentication flows managing multi-tier user lifecycles, cart state, and protected API routing for production-scale e-commerce
- Containerized the full stack with Docker multi-stage builds and deployed via Railway with automated CI/CD, reducing deployments from manual scripts to push-triggered pipelines
- Integrated Cloudflare R2 behind API gateway patterns, enforcing rate limiting and efficient asset delivery for media-heavy workloads
- Directed multi-agent AI development with OpenCode, guiding LLM agents to generate production code through human-in-the-loop validation

Key Skills: TypeScript, PostgreSQL, Prisma ORM, Docker, CI/CD, RBAC, Cloudflare R2, OpenCode, API Gateway

Embedded Software Engineer

Jul 2025 - Dec 2025

Waygate Technologies (Baker Hughes)

Skaneateles, NY

- Automated production quality tracking with CI/CD pipelines, providing actionable telemetry that cut manual inspection overhead and accelerated release validation
- Processed and modeled large-scale industrial inspection data, optimizing backend pipeline throughput and improving production system reliability
- Designed and deployed Python-driven test automation frameworks across distributed environments, increasing regression coverage and reducing post-release defects
- Delivered computer vision models into production testing via C++ inference pipelines, enabling real-time defect detection
- Guided AI coding assistants (Copilot, Claude Code) to accelerate C++ inference development, maintaining quality and documentation standards

Key Skills: Python, C++, Data Pipelines, Automation Testing, CI/CD

Jr. Software Engineer Intern

Jun 2024 - Sep 2024

Tive Technology

Remote

- Built and optimized RESTful APIs with SpringBoot, reducing database query latency through streamlined data access patterns
- Designed Firestore data models and security rules, enforcing secure multi-user access across the platform
- Delivered 4 Flutter-based mobile features adopted by 1,000+ active users within the first quarter
- Validated platform reliability through systematic load testing under growing multi-user concurrency

Key Skills: RESTful APIs, Python, SpringBoot, Firestore, Data Modeling, GitHub Copilot

Research Assistant

Sep 2023 - May 2024

RIT CAIR Lab (Computational Accessibility)

Rochester, NY

- Containerized real-time data-processing pipelines with Docker, enabling reproducible one-command deployments across heterogeneous Linux research environments
- Architected a RESTful API layer handling high-throughput live transcription streams, supporting real-time accessibility research without data loss
- Structured and analyzed comparative experimental datasets for affective vs. traditional captioning, producing actionable insights for accessibility research
- Built interactive captioning interfaces with React and Vue.js for comparing captioning modalities in real time

Key Skills: Python, RESTful API Design, Docker, Google Cloud Platform, Linux, React, Vue.js

Research Assistant

Sep 2022 - Jul 2023

RIT Global Cybersecurity Institute

Rochester, NY

- Performed statistical analysis and processing on MITRE threat alerts to identify security patterns
- Set up space cyber-physical simulations with NS-3 for satellite communication and motion modeling
- Analyzed real-time satellite motion and communication systems using MATLAB and C++

Key Skills: MATLAB, Python, C++, NS-3, Satellite Communications, Cybersecurity

Research Intern

May 2022 - Jul 2022

Tufts University

Medford, MA

- Optimized properties of novel polymers using gradient descent algorithms in MATLAB and C++
- Applied object-oriented class structure and documentation practices to the Morpho-Lang compiler project
- Solved compiler and modular design problems for Morpho-Lang, an open-source scientific computing language
- Assembled a research poster presented to material science experts

Key Skills: MATLAB, C++, Machine Learning, Compiler Design

PROJECTS

NeuralCube — Autonomous Robot (Personal Research)

2024 - Present

Collaborator

Remote

- Contributed to a personal research robot orchestrated by multi-agent LLMs and built on ROS2 as the backend-focused contributor
- Deployed vLLM and SGLang inference servers on Linux for low-latency LLM responses in real-time autonomous decision-making
- Integrated the multi-agent orchestration layer with ROS2 nodes, routing navigation, memory, and search tasks to specialized subagents
- Managed robot digital twin state using ROS2 parameters and state publishers for consistency across perception, reasoning, and action loops

Key Skills: Python, ROS2, Linux, vLLM, SGLang, Multi-Agent Systems, LLM Inference

4G LTE Unlimited Distance Drone (Personal Project)

Aug 2023 - Dec 2024

Rochester, NY

- Built a programmable 4G LTE drone with Raspberry Pi, enabling beyond-visual-line-of-sight operation through internet-based communication
- Implemented server-side real-time image segmentation and autonomous navigation for self-directed flight based on visual input
- Integrated Pixhawk flight controller with ArduPilot firmware and Sixfab 4G LTE cellular hat for reliable remote piloting

Key Skills: Python, Raspberry Pi, Computer Vision, IoT

LEADERSHIP & COMMUNITY

Computer Science House (CSH) — RIT

Active Member

Aug 2021 - Present

- Active member of RIT's computer science living-learning community
- Hosted 5 technical seminars and workshops on DevOps, Linux administration, and software development to mentor peers

RIT Artificial Intelligence Club

Member

Aug 2022 - Present

- Explored active AI/ML research areas including large language models, computer vision, and autonomous systems
- Collaborated on group projects within an AI enthusiast community

EARLY PROJECTS & INTERESTS

- 3D printing seminar and blog covering the full FDM pipeline, slicing to Gcode, and first-print guidance (2021)
- Persistence of Vision (POV) display with custom 3D-printed armature, iterated through multiple prototypes (2021)
- DIY ergonomic laptop stand designed and 3D-printed to improve daily comfort (2021)
